# **CPS** (Cyber Physical System)

---

- 
1. **Current Trends of Computer Science**
  2. **Cyber-Physical System (CPS)**
  3. **Advanced Cyber-Physical System**

# Cyber Systems

## ◎ Cyber is

- ◎ More than just software
- ◎ More than just networking
- ◎ More than just embedded computing

## ◎ Cyber implies the **integration** of

- ◎ Computation
- ◎ Communication
- ◎ Control

# Physical Systems

---

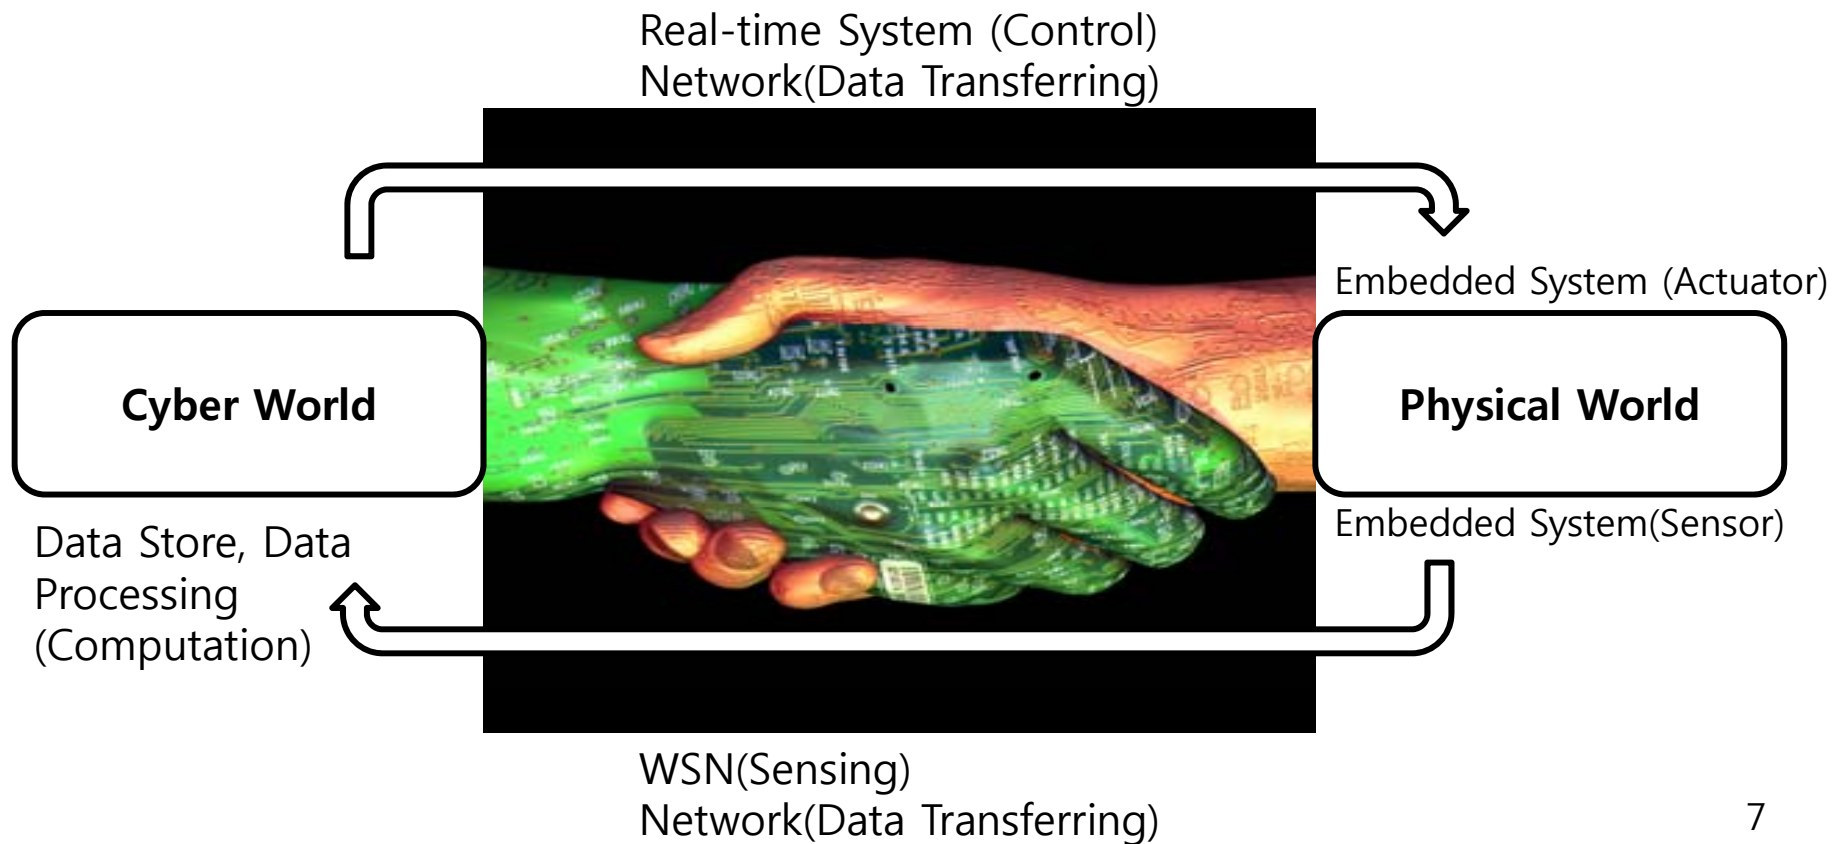

## © Physical Systems means

- ⦿ Natural and human-made systems governed by the laws of physics and operating in continuous time

# What is CPS?

---

# What is CPS?

---

## © Three definitions for CPS

- ⦿ System in which the cyber world and physical world are **tightly integrated** at all scales and levels (Wikipedia)
- ⦿ System that integrates **computation and communication capabilities** with **monitoring and/or control entities** in the physical world (S. Shankar Sastry, UC Berkeley)
- ⦿ CPS will **transform how people interact with the cyber world** just like the Internet transformed how we interact with one another. (NSF CPS Workshop)

# What is CPS?

---

## © Examples for the 1'st definitions

- ⦿ System in which the cyber and physical systems are tightly integrated at all scales and levels (Wikipedia)

Google Glasses

# What is CPS?

## ◎ Examples for the 2'nd definitions

- ◎ System that integrates **computation and communication capabilities** with **monitoring and/or control entities** in the physical world

(S. Shankar Sastry, UC Berkeley)

Auto parking system

데모 아우디

### Monitoring

여유 공간, 앞차/뒷차/옆차 거리, 블록 및 벽까지 거리

### Communication Media:

Embedded System Integrated (bus)

### Computation:

핸들 각도, 전진, 후진, 속도 등

### Control:

핸들, 액셀, 브레이크

# What is CPS?

## ◎ Examples for the 3'd definitions

- ◎ CPS will **transform how we interact with the cyber world** just like the Internet transformed how we interact with one another. (NSF CPS Workshop)

Physical world

Golf Game

CPS world

# Examples

---

- ◎ Common applications of CPS typically fall under sensor-based systems and autonomous systems.
  - ◎ Example
    - ◎ **Intervention** (e.g., collision avoidance)
    - ◎ **Precision** (e.g., robotic surgery and nano-level manufacturing)
    - ◎ **Operation in dangerous or inaccessible environments** (e.g., search and rescue, firefighting, and deep-sea exploration)
    - ◎ **Coordination** (e.g., air traffic control, war fighting)
    - ◎ **Efficiency** (e.g., zero-net energy buildings)
    - ◎ **Augmentation of human capabilities** (e.g., healthcare monitoring and delivery).

# Examples

## © Other CPS Examples

- **Home care: monitoring and control**
  - Pulse oximeters, blood glucose monitors, infusion pumps (insulin), accelerometers (falling, immobility), wearable networks (gait analysis), prosthetics...
- **Operating Room of the Future (Goldman)**
  - Closed loop monitoring and control; multiple treatment stations, plug and play devices; robotic microsurgery (remotely guided?)
  - System coordination challenge

pacemaker

Remote Robotic surgery

# Examples

---

## ◎ Other CPS Examples

- ◎ Aviation Industry
  - ◎ Air traffic control systems
    - ◎ Systems to prevent collisions, organize and expedite the flow of traffic, and provide information and other support for pilots when able
  - ◎ Automatic pilot avionics
    - ◎ Control key systems of the plane and its flight by using electronics for communications, navigation, collision avoidance and weather
    - ◎ Many aircraft also have **collision avoidance systems**, which provide additional safety by warning pilots when other planes get too close

**Air traffic control**

**Automatic pilot avionics**

# Examples

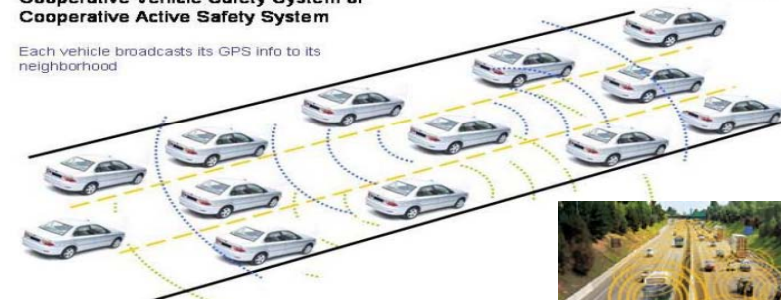

## Other CPS Examples

### Intelligent Transportation Systems (ITSs)

- **Safety:** vehicles broadcast their physical state information over a wireless network to allow their neighbors to track them and predict possible collisions, trigger speed-limit reminder, accident warning
- **Traffic information:** share information on the traffic on-road for traffic congestion alarm, get map updates
- **Entertainment:** search for places of interest via the Internet

#### Cooperative Vehicle Safety System or Cooperative Active Safety System

Each vehicle broadcasts its GPS info to its neighborhood

Traffic information sharing

#### HOW IT WORKS

Safety information

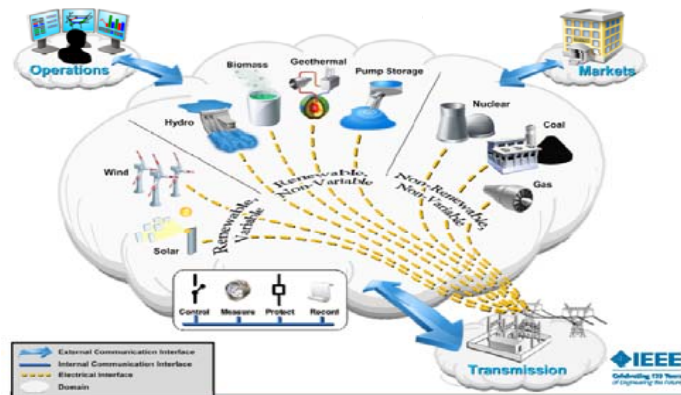

# Examples

## Other CPS Examples

### Smart Power Grid

- 스마트그리드는 송전망과 배전망에 정보기술을 접목하여 양방향 데이터통신이 가능하도록 함으로써 전력 사용 효율성을 높이고 나아가 전력사용을 줄여 온실가스배출을 억제하는 것을 목표로 삼고 있다.
- Current picture
  - Reactive equipment protection
  - Power outage over the world
    - 25 July 2010, Washington D.C. blackout
    - 22 March 2010, Malta, national-wide blackout

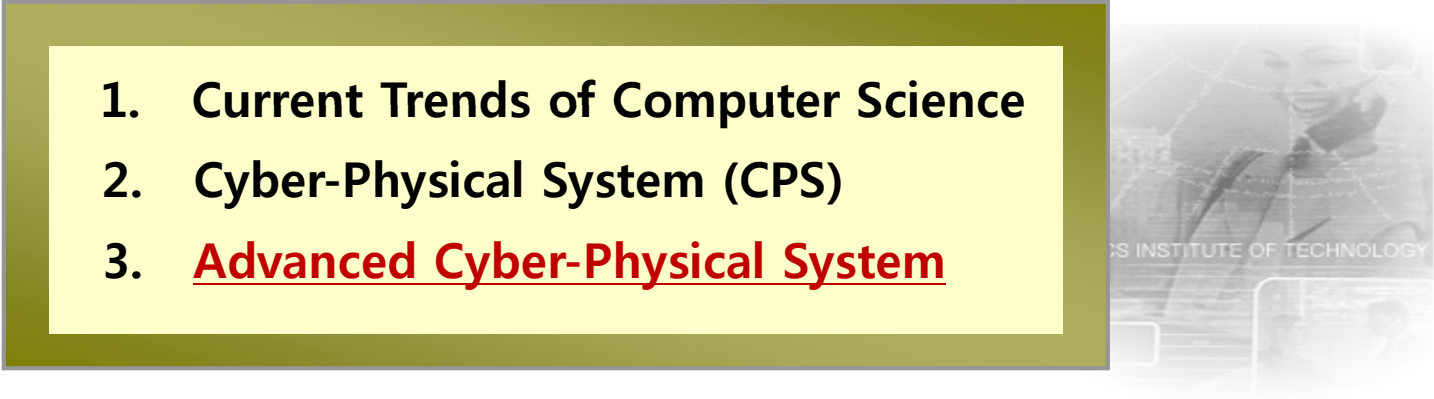

# **CPS** (Cyber Physical System)

---

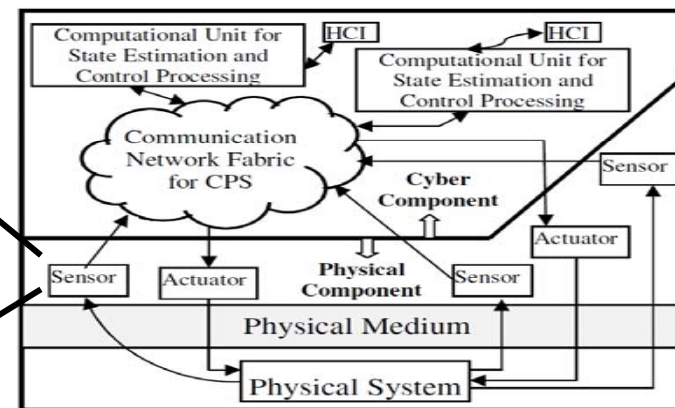

- 
1. **Current Trends of Computer Science**
  2. **Cyber-Physical System (CPS)**
  3. **Advanced Cyber-Physical System**

# What is Advanced CPS

## ◎ What is the Advanced CPS

- ◎ **Co working with many WSNs**
- ◎ **Big data processing**
- ◎ **More accurate decision**
- ◎ Controlling actuator with a distributed real-time manner

Cf.) 일반적인 CPS의 예:  
로봇

Source: "Cyber-Physical Systems: A confluence of Cutting Edge Technology Streams", ICACC'11, 2011.

# What is Advanced CPS

---

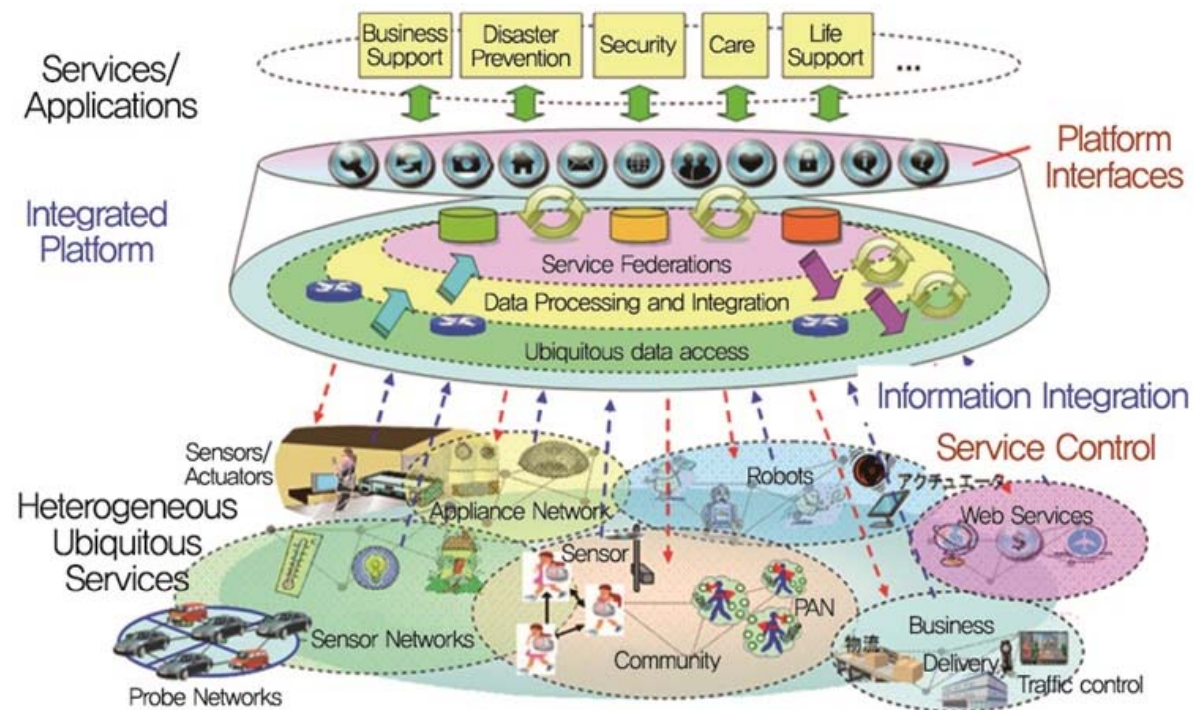

## ◎ Big Picture of Advanced CPS

Source: Vincenzo Liberatore, "Networked Cyber-Physical Systems: An Introduction", 2007

# What is Advanced CPS

## ◎ Big Picture of Advanced CPS

# What is Advanced CPS

---

## ◎ Advance CPS Vs. CPS

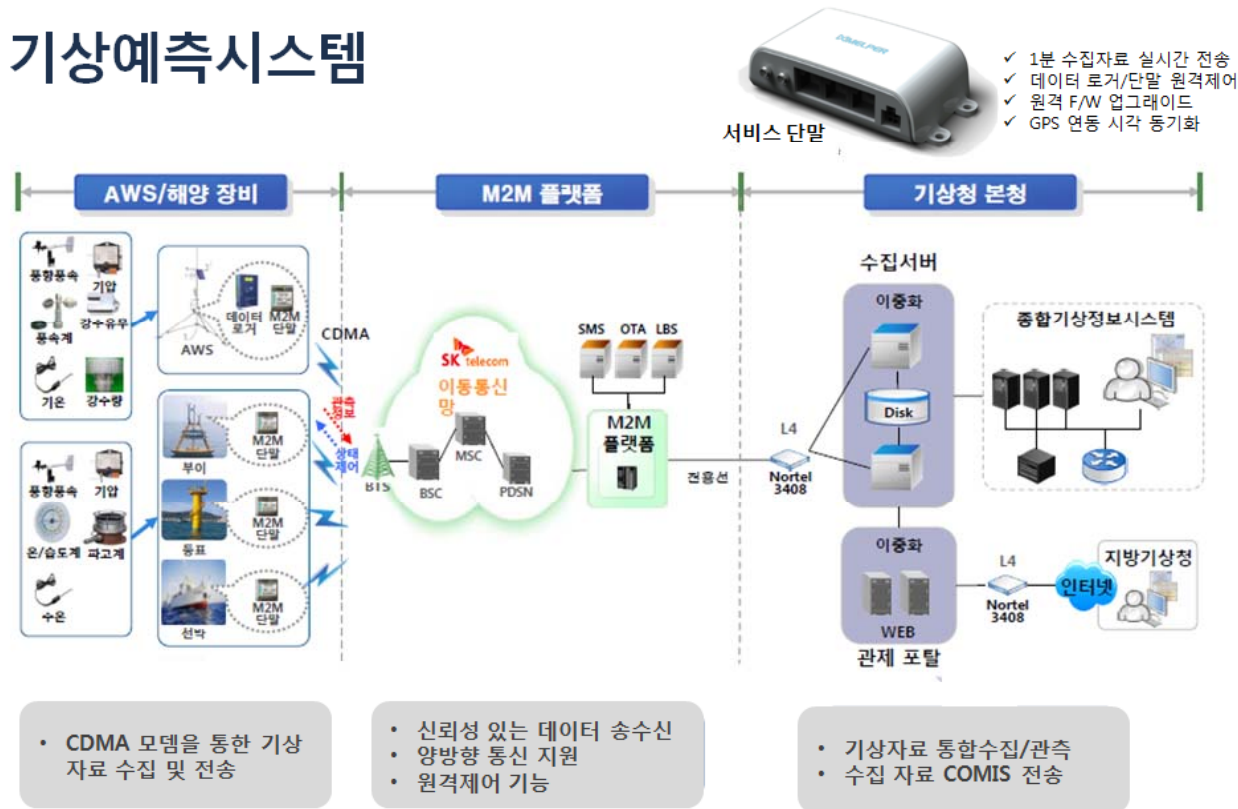

System with sensor, computer and actuator  
(ex. Robot)

- ◎ A more holistic/interdisciplinary approach
- ◎ More distribution
- ◎ Less structure
- ◎ Interactions between multiple autonomous domains
- ◎ Increasingly open systems

Generally the term of “CPS” means **advance CPS**.

# Examples

## 기상예측시스템

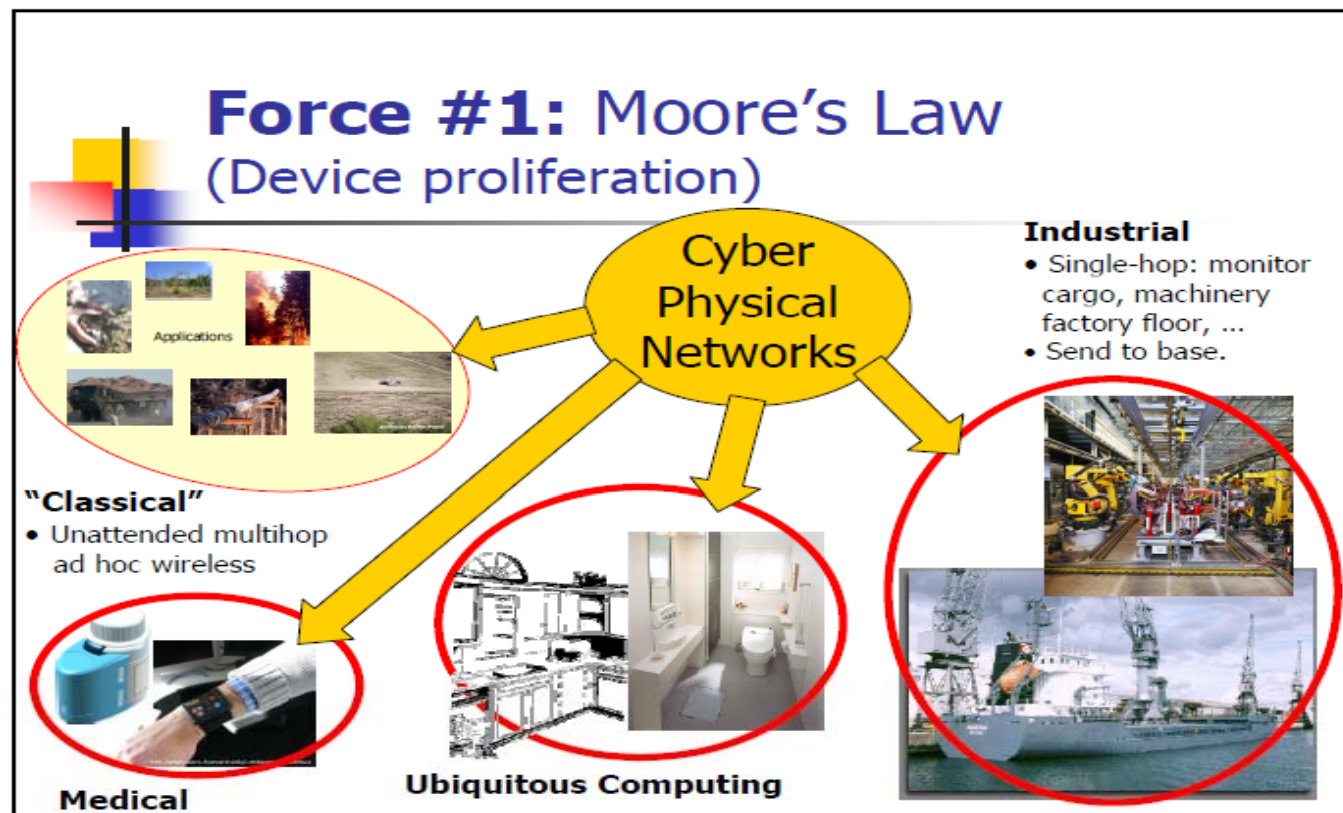

# Examples

- 예) 살인 예측 시스템
  - 드라마: Person of Interest

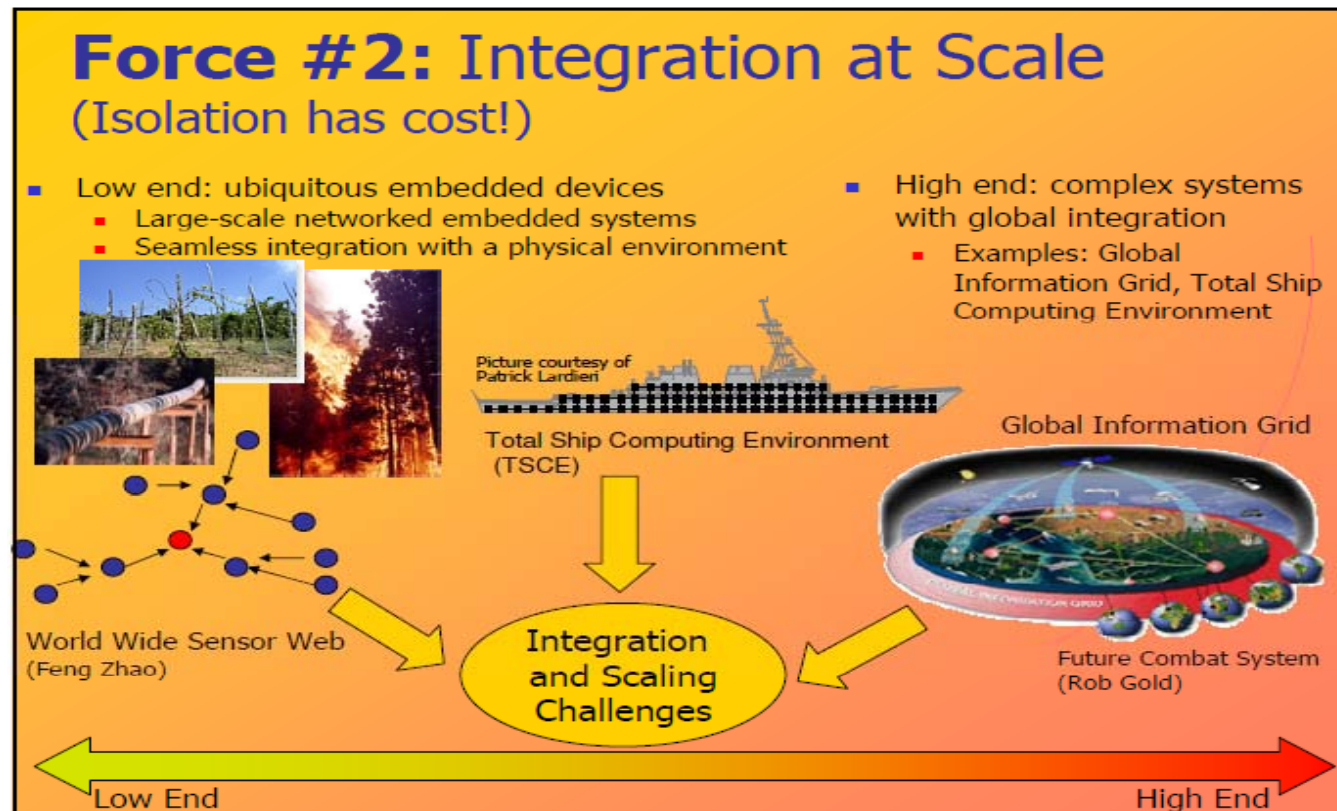

# Why Advanced CPS?

# Why Advanced CPS?

# Why Advanced CPS?

---

## Force #3: Biological Evolution

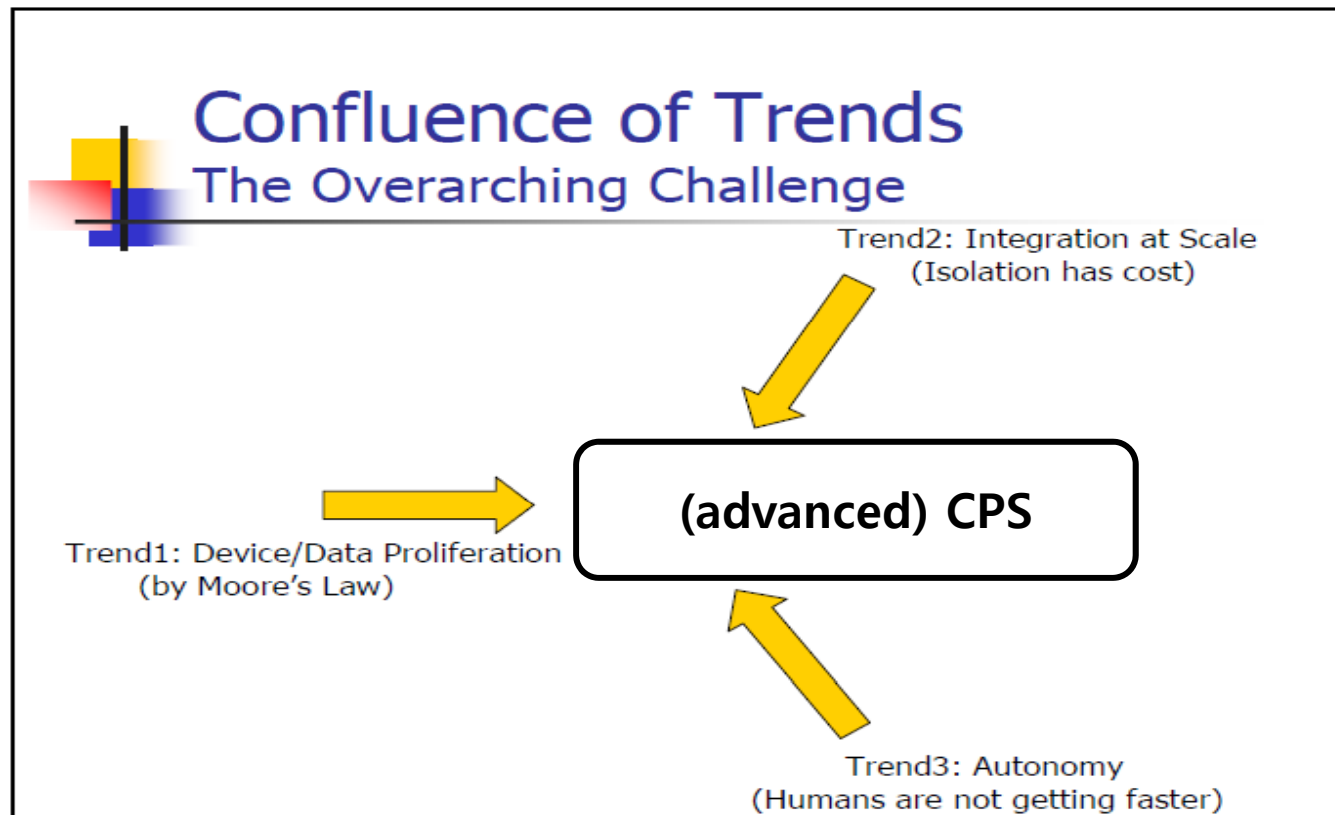

- **It's too slow!**

- The exponential proliferation of data sources (afforded by Moore's Law) is *not* matched by a corresponding increase in human ability to consume information!

→ Increasing autonomy (human out of the loop), direct world access

# Why Advanced CPS?

---

# Characteristics of Advanced CPS

---

## A New Research Area

- Artificial intelligence
  - Can machines think?
  - By A. Turing in “Computing Machinery and Intelligence”, 1950
- Ubiquitous Computing
  - Computers everywhere
  - By Mark Weiser, XEROX PARC, 1990
- Pervasive Computing
  - 6As Model, The “authorized access to anytime-anywhere-any device-any network-any data”
  - Industry vision (1999, IBM, etc.)
- Cyber-Physical Systems
  - Computation and networking integrated with physical processes

# Characteristics of Advanced CPS

---

## Research Challenges

- Build the interface between the cyber world and the physical world?
- Why this is hard:
  - No clear boundaries between cyber and physical worlds.
  - Boundaries are always changing.
  - No perfect digitization of the continuous world
  - Inpredictable complex systems
  - Essentially multi-disciplinary

# Characteristics of Advanced CPS

---

## Multi-disciplinary

- Sensing technologies
- Distribute computing and networking
- Real-time computing
- Control theory
- Signal processing
- Embedded systems

# Characteristics of Advanced CPS

---

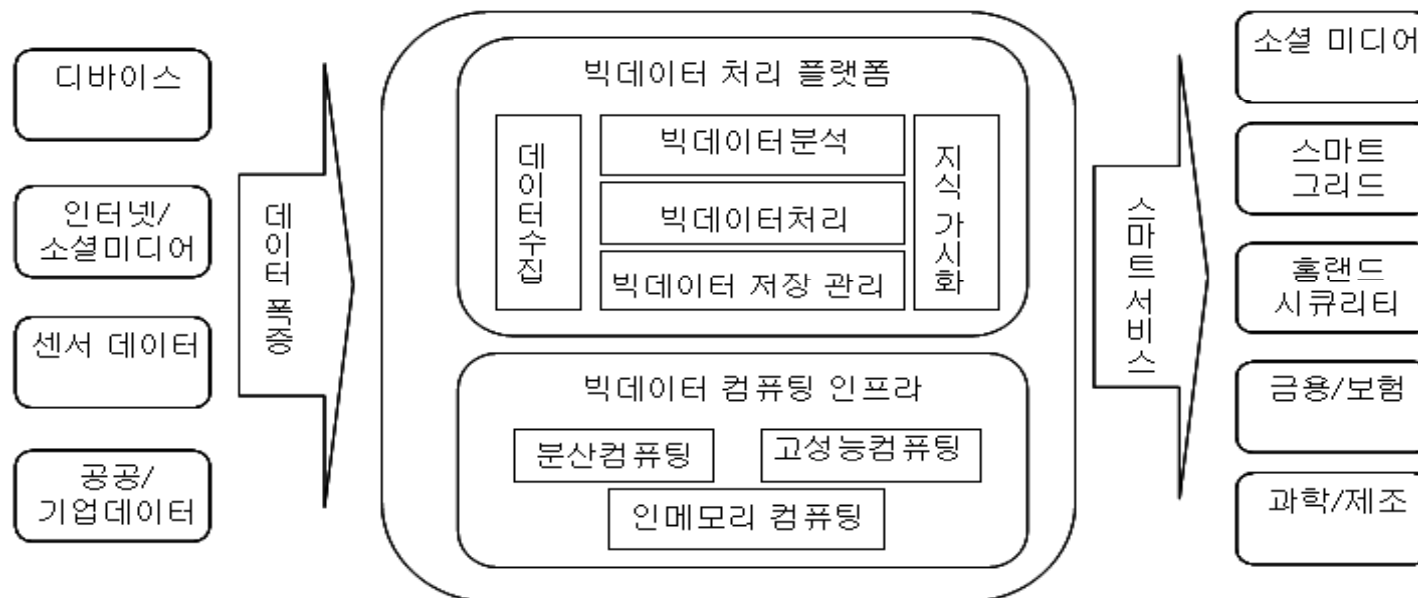

## Current Research Issue

- ⊙ 1. Sensing
  - ⊙ Context from multiple sensors
  - ⊙ Social sensing (even better, social + sensor)
  - ⊙ Distributed group sensing
  - ⊙ Crowdsourcing / citizen science
- ⊙ 2. Output
  - ⊙ Precision augmented reality
  - ⊙ Unique uses of augmented reality beyond geolocation
  - ⊙ Real-time control
- ⊙ 3. Network
  - ⊙ Power efficiency
  - ⊙ Interoperability between the heterogeneous networks
  - ⊙ Network QoS & Comm. Middleware
- ⊙ 4. Big Data Processing
- ⊙ 5. Validation & Verification (e.g. simulation, formal models, etc.)

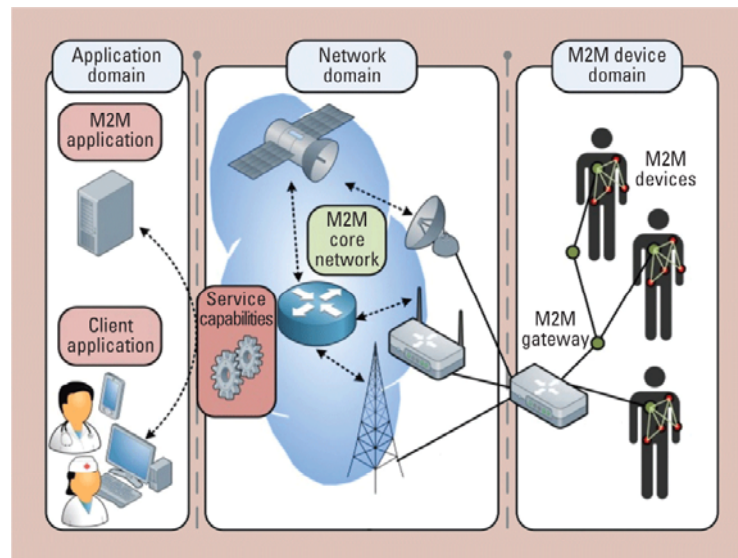

## cf.) BigData

- ◎ BigData 기술은 advanced CPS의 정확도와 신뢰성을 향상시켜주는데이터 처리/저장/분석 측면의 기반기술이다.

## cf) M2M 또는 D2D

- ◎ M2M 또는 D2D는 디바이스끼리의 통신기술에 초점을 둔 기술로써, advanced CPS를 구현하기 위한 네트워크 측면의 기반기술임

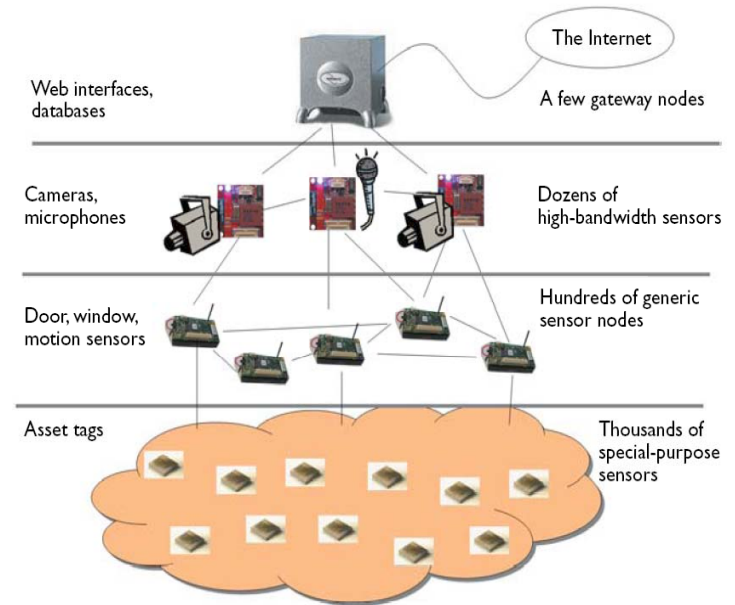

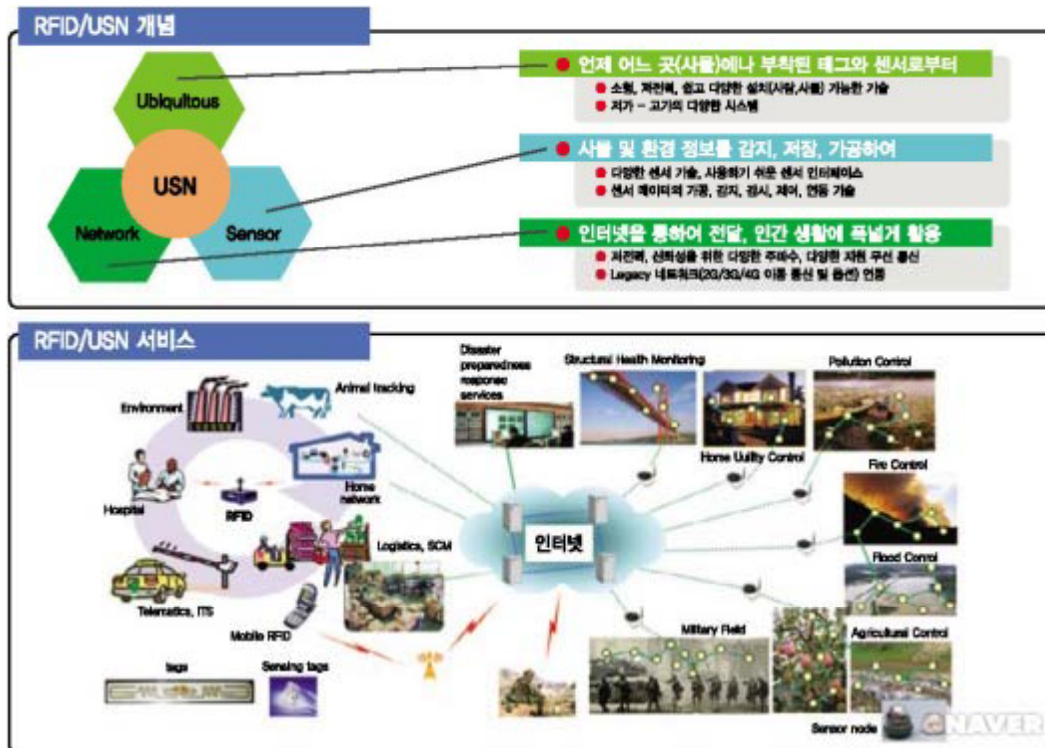

## cf) IoT (Internet of Things)

- ◎ IoT는 advanced CPS와 거의 같은 의미로 통용됨.

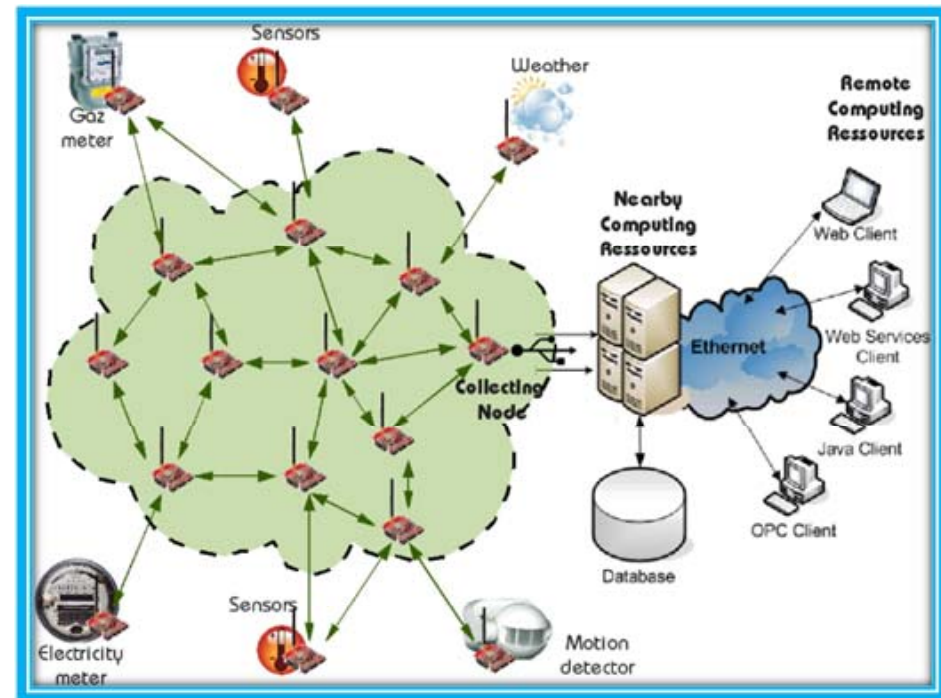

## cf) USN

◎ USN은 advanced CPS 의 데이터 수집부분에 해당된다.

## cf) WSN ← 본 과목의 주된 관심사

- ◎ WSN은 USN의 다양한 종류의 센서들 중 무선으로 연결된 저가의 소형센서들로 이루어진 네트워크를 말한다.

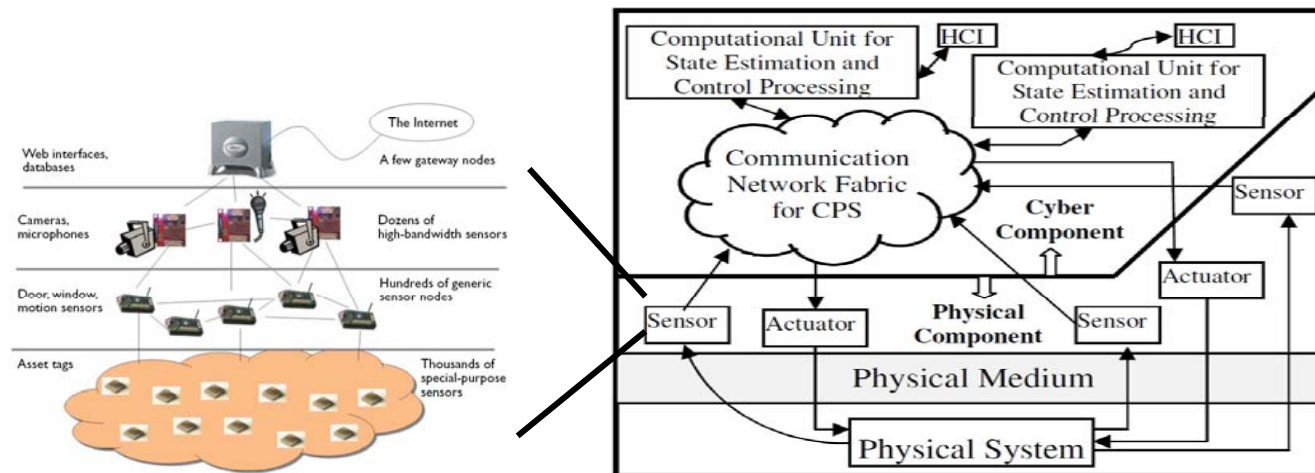

# WSN in CPS

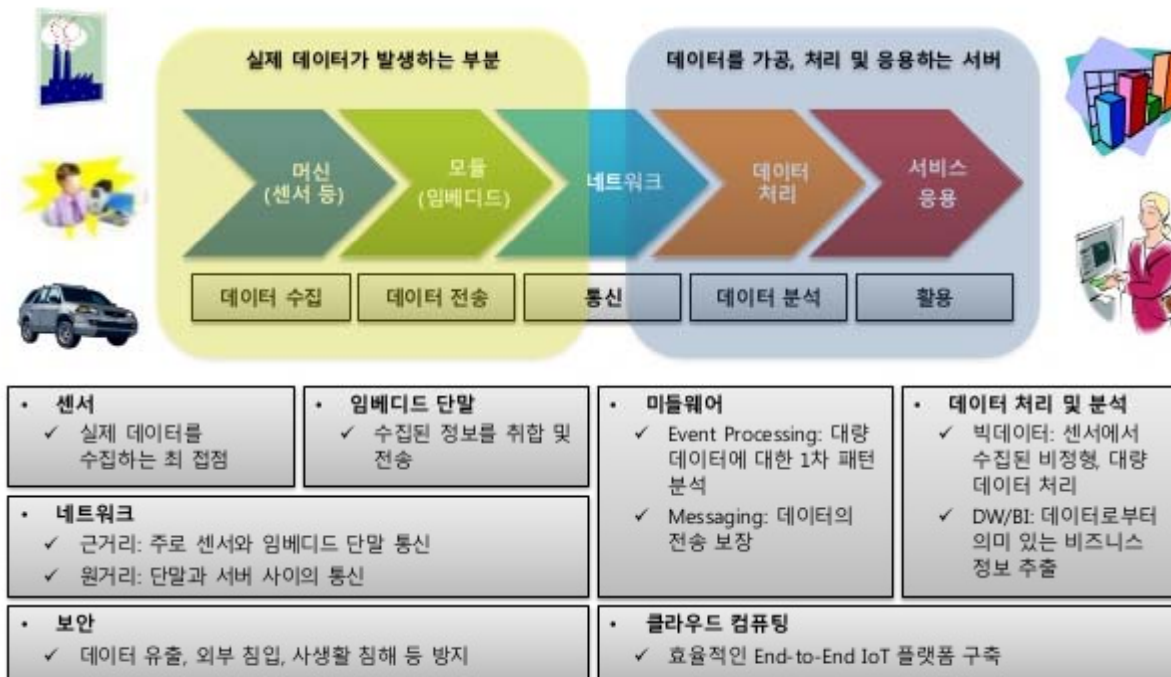

## ◎ CPS -> human

- ◎ **USN** -> sensory organ, Knowledge, experience,
  - ◎ 그 중 **WSN**은 neural network 의 역할 (각 센서는 neuron의 역할)
- ◎ **Actuator** -> muscular organ, personal coach
- ◎ **Cloud computing with big-data** -> brain
- ◎ **Network infra** -> neural network / muscle-control nerves

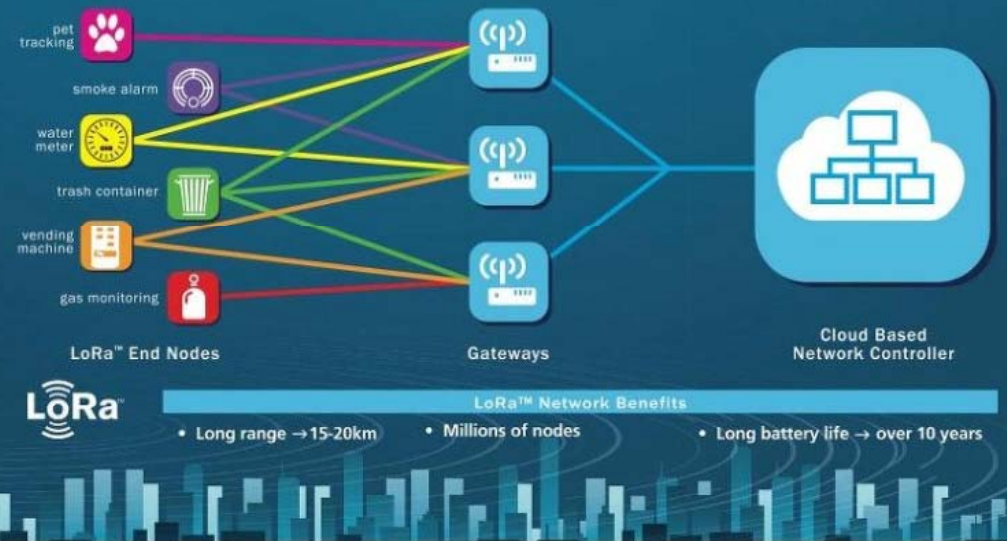

# 참고) IoT 통신 기술

### THREE EASY STEPS FOR A COMPLETE SOLUTION DEPLOYMENT

#### STEP ONE

Select  
End-Node  
Module

#### STEP TWO

Select  
Gateway  
Solution

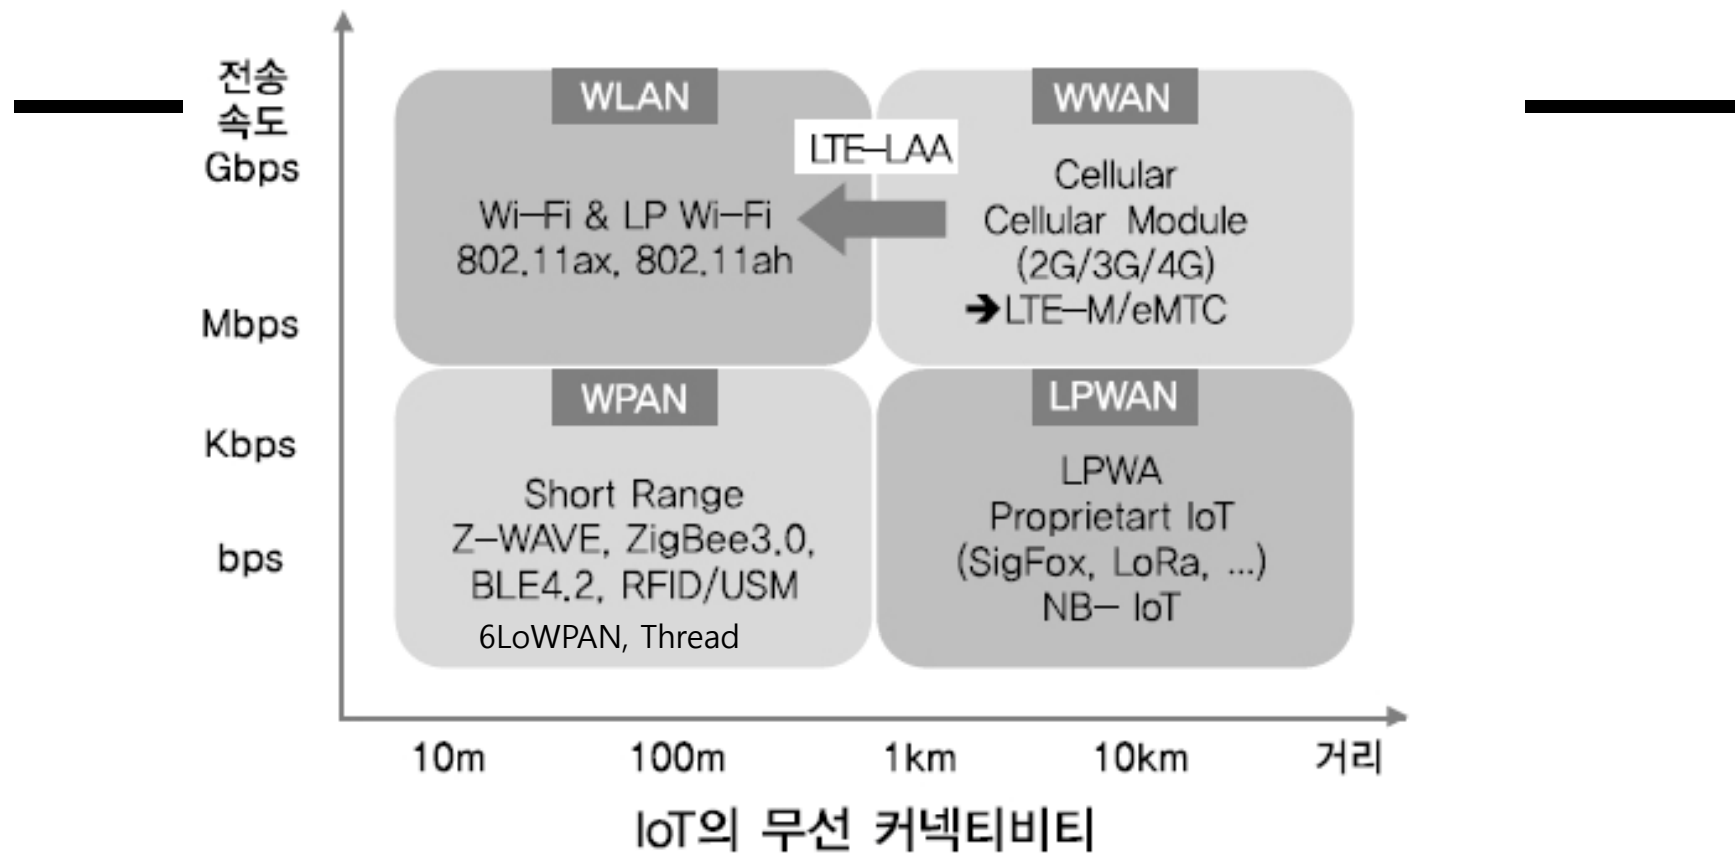

#### STEP THREE

Provision  
Gateway to  
Network  
Controller

구분	저전력 IoT 전용망 기술			기존 데이터망 기술
	<u>로라(LoRa)</u>	NB-IoT	<u>SigFox</u>	LTE-M (Cat.1)
주파수 대역	▪ 비 면허 대역 (920MHz)	▪ LTE 대역 내	▪ 비 면허 대역 (920MHz)	▪ LTE 대역 내
통신 규격 표준화	▪ <u>LoRa Alliance</u> 표준	▪ 3GPP LTE 표준화 진행 중 (Rel.13, ~'16.2Q)	▪ ETSI (유럽 표준)	▪ 3GPP LTE ▪ 기존 LTE 통신 중 가장 속도가 낮은 규격
셀 커버리지	▪ ~10km	▪ ~10km	▪ ~10km	▪ ~5km
전송 속도	▪ ~5.4kbps	▪ ~수백kbps	▪ 100~600bps	▪ 10Mbps 이하
Global 상용 현황	▪ 기상용화	▪ '17년 예상	▪ 기상용화	▪ 기상용화
Eco-system	▪ Open ▪ Global 다수 업체 참여	▪ Open ▪ Global 다수 업체 참여	▪ <u>SigFox</u> 社 독점	▪ Open ▪ Global 다수 업체 참여
모뎀 가격	▪ 약 5\$	▪ 5~10\$		▪ 약 20\$

## ◎ IoT 플랫폼

### ◎ HW 플랫폼

- ◎ 인텔의 애디슨보드와 라즈베리파이, 아두이노 우노, 삼성의 아틱, TI의 블릭 등 여러 하드웨어 오픈소스 플랫폼

### ◎ SW플랫폼 : OS + 통신

- ◎ 오픈소스 OS로는 아두이노 스캐치, MS의 윈10 IOT Core, 삼성의 타이젠, 구글의 브릴로(안드로이드 개선)
- ◎ 크로스 통신 플랫폼 (다양한 주변 제품들끼리 상호작용)
  - ◎ 구글 워브, 퀄컴 올조인 등
    - ◎ wifi, Thread 등 다양한 통신 프로토콜을 안정적이고 작은 크기로 지원.
